## OpenAPI Initiative

OpenAPI  
Specification

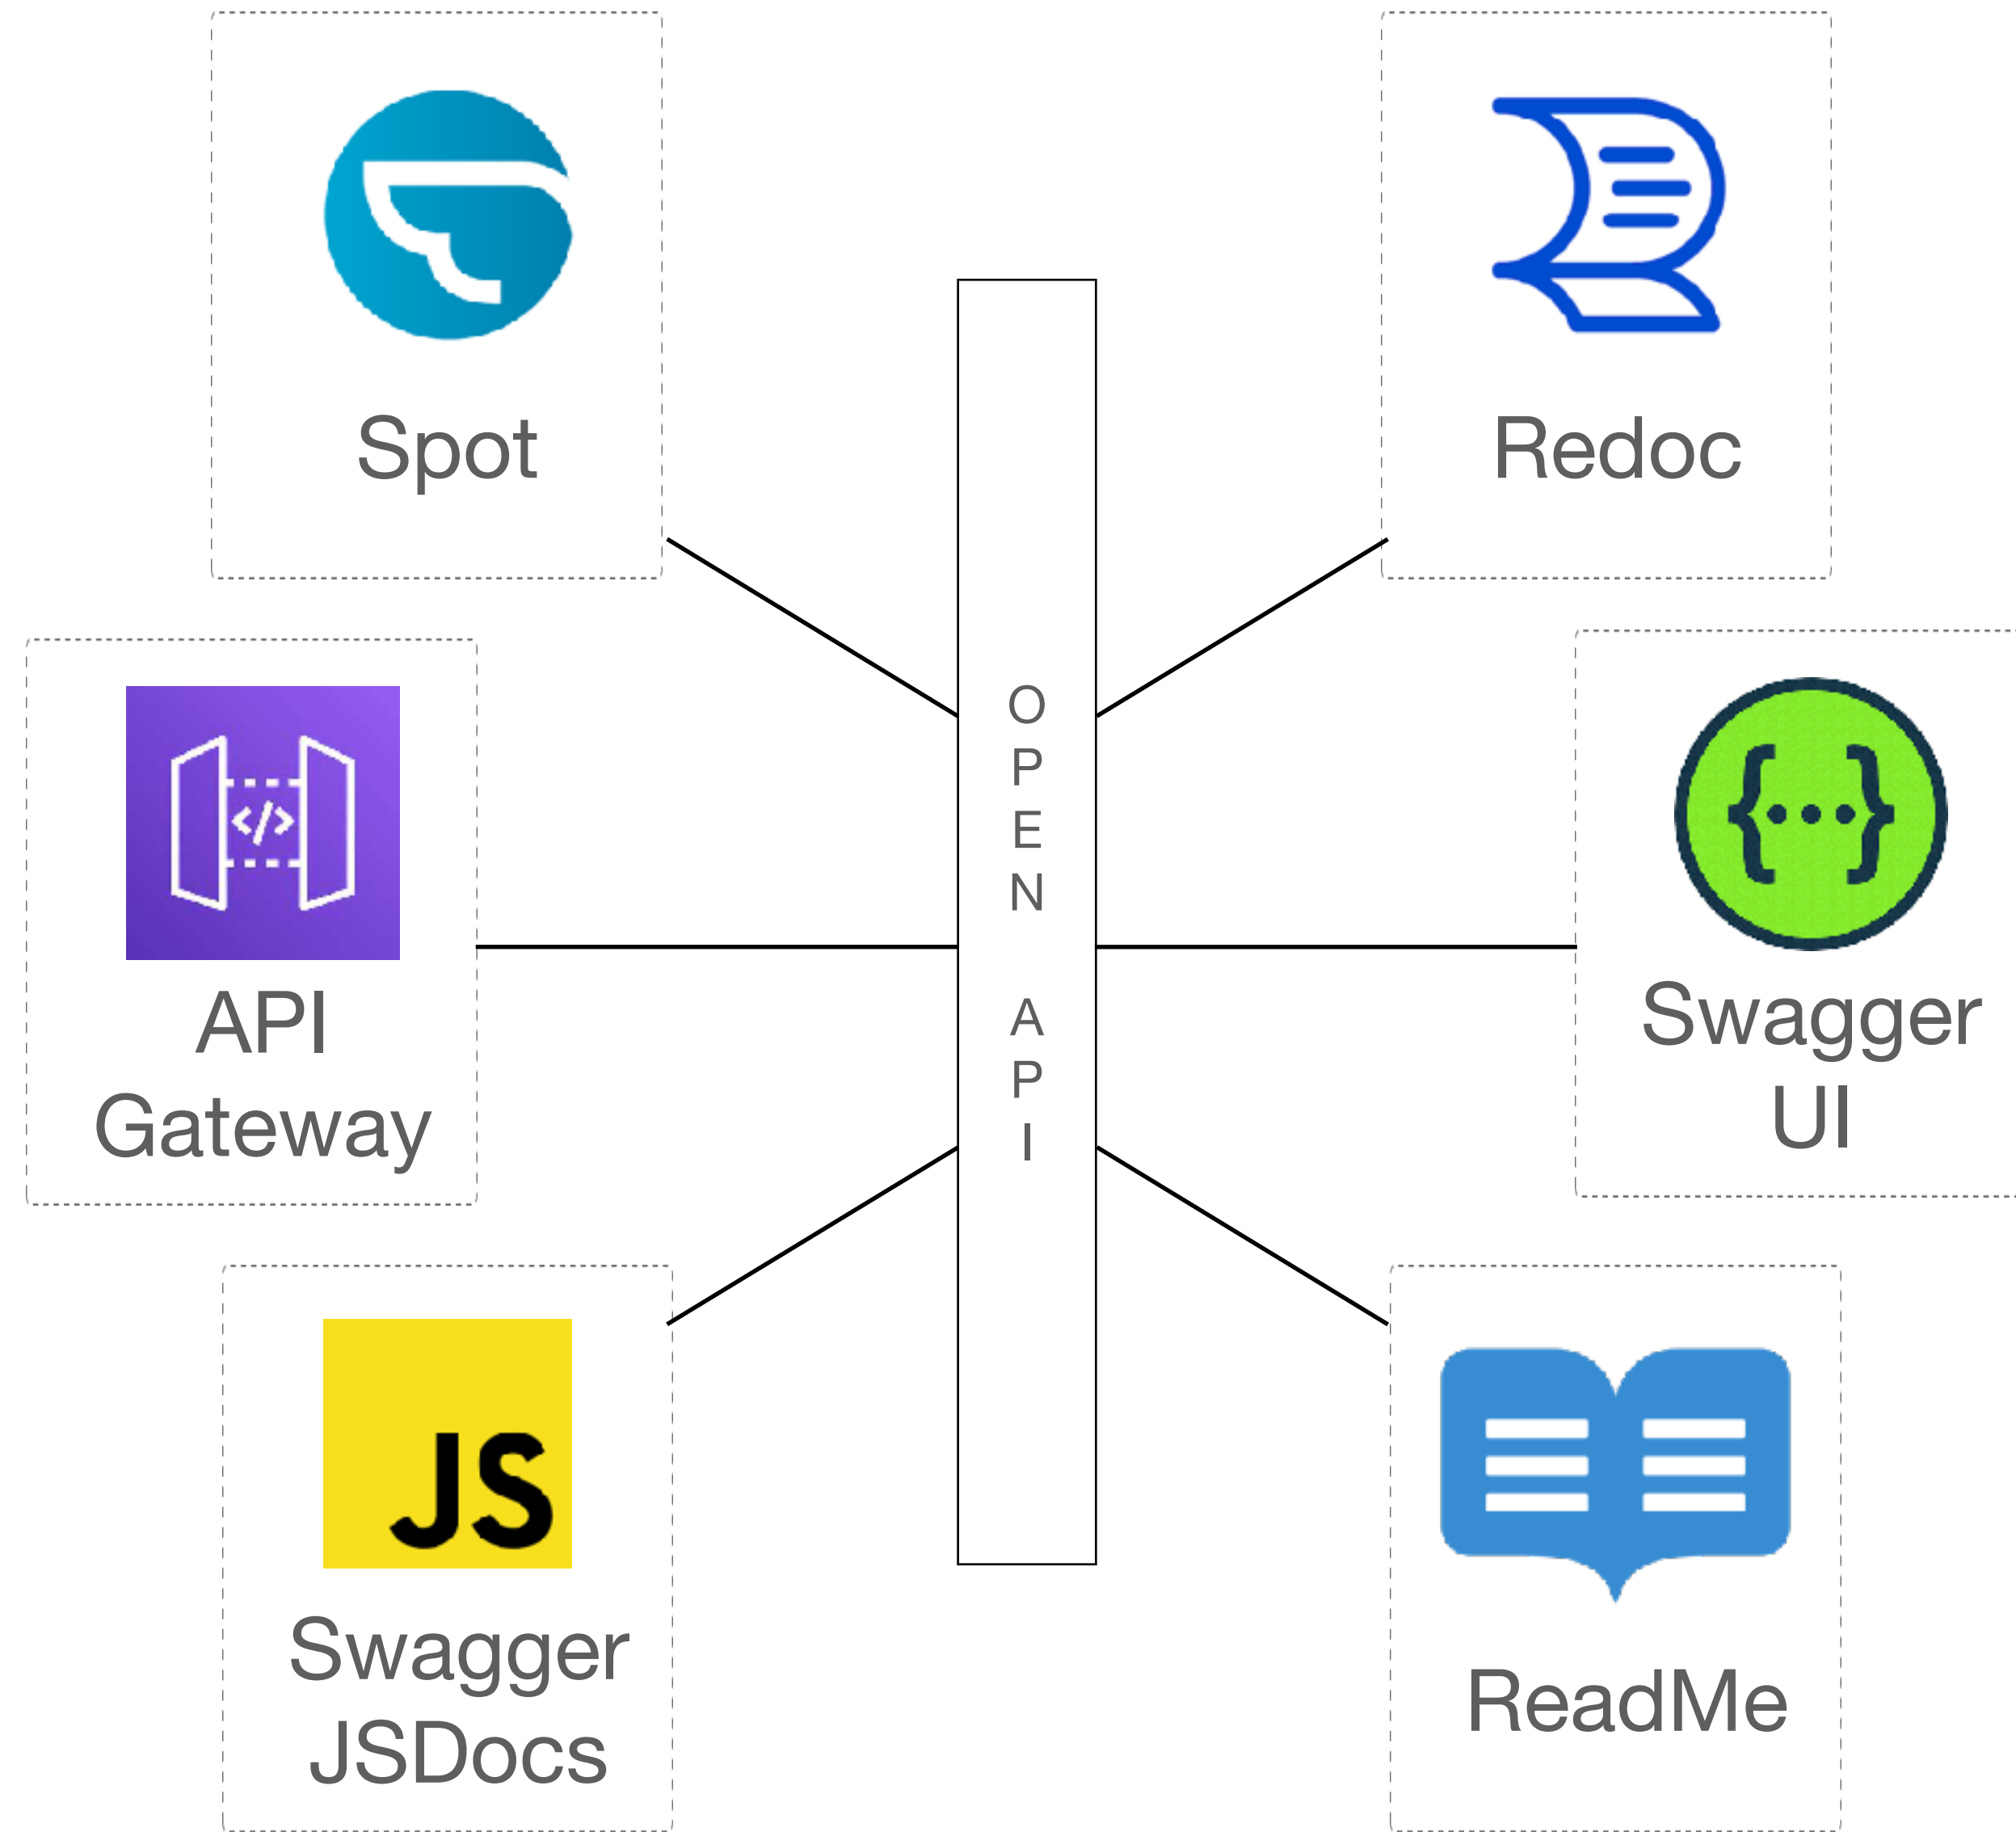

# In Short

- OpenAPI = The specification itself, formerly known as Swagger specification
- Swagger = Tools used in the implementation of OpenAPI

**Why is using OpenAPI useful?**

# JSON

# Specs Generation

# Swagger JSDocs

A yellow square with the letters 'JS' in black, representing JavaScript.

```
/**
 * @openapi
 * /:
 *   get:
 *     description: Welcome to swagger-jsdoc!
 *     responses:
 *       200:
 *         description: Returns a mysterious string.
 */
app.get('/', (req, res) => {
  res.send('Hello World!');
});
```

# Spot

```
1  import { body, endpoint, request, response, String } from "@airtasker/spot";
2
3  /**
4   * Endpoint for creating new users
5   */
6  @endpoint({
7    method: "POST",
8    path: "/users",
9  })
10 export class CreateUser {
11   @request
12   request(@body body: CreateUserRequest) {}
13
14   /**
15    * User created successfully
16    */
17   @response({ status: 201 })
18   successfulResponse(@body body: CreateUserResponse) {}
19 }
20
21 interface CreateUserRequest {
22   /** First name of the user */
23   firstName: String;
24   /** Last name of the user */
25   lastName: String;
26 }
27
28 interface CreateUserResponse {
29   /** First name of the user */
30   firstName: String;
31   /** Last name of the user */
32   lastName: String;
33   /** User role that defines its permissions */
34   role: String;
35 }
36
```

## My API (1.0.0)

Download OpenAPI specification: [Download](#)

This API is a POC for using SPOT in our projects in Coformatique

### CreateUser

Endpoint for creating new users

REQUEST BODY SCHEMA: application/json

firstName	string
required	First name of the user
lastName	string
required	Last name of the user

### Responses

> 201 User created successfully

#### Request samples

**POST** /users

Payload

Content type  
application/json

Copy

```
{  "firstName": "string",  "lastName": "string"}
```

#### Response samples

**201**

Content type  
application/json

Copy

```
{  "firstName": "string",  "lastName": "string",  "role": "string"}
```

# Swagger UI

default

**POST** /users

Endpoint for creating new users

**Parameters** [Try it out](#)

No parameters

**Request body** required application/json

[Example Value](#) | [Schema](#)

```
{
  "firstName": "string",
  "lastName": "string"
}
```

**Responses**

Code	Description	Links
201	User created successfully	No links

Media type application/json

Controls Accept header.

[Example Value](#) | [Schema](#)

```
{
  "firstName": "string",
  "lastName": "string",
  "role": "string"
}
```

# Conclusion

- Relying on OpenAPI specification is viable and important
- Spot seems like a great tool for specs generation
- ReadMe seems like a great tool for docs generation

# Worth Investigating

- API Gateway (Specs generation)
- Postman (Docs generation)

**Thank You**
